

Intel a Jib 3' Extension Arm

The Intel-A-Jib Extension will add 3.5 feet (107cm) to the full extension resulting in a 13.5 foot (412cm) maximum operating radius. Aside from additional counterbalance weights, no other modifications are required to the jib's tailpiece when adding this new extension.

Because of the exclusive X Box construction of the Intel-A-Jib, the extended version of the Intel-A-Jib will safely and securely accommodate a camera package of 40 pounds (18kg) with minimal radial twisting and robust linear rigidity. The unique, X Box construction of the Intel-a-Jib allows for a full rigid extension of the jib arm without the need for cables, turnbuckles or other stabilizing devices that are both clumsy and time-consuming in set up.

Intel-A-Jib Extension kit contains:

- (1) 3.5' (107cm) Arm
- (1) Parallel Bar
- (2) Aircraft Pins
- (1) Anti-Sag Spacer
